40. *Nature*.—The artificial boundaries are cleared lines demarcated by wooden posts, and occasionally by stone slabs, surrounded by a cairn of stones. Where stones are scarce the cairns are built mainly of mud plaster. Where the reserves adjoin *malguzari*, *zamindari* or State forests the boundaries are 40 feet wide and where they march with village forests or cultivated lands they are only 20 feet wide unless required as fire lines when they are kept 40 feet wide.

41. *Maintenance.*—During the last plan the system of annual clearing was altered to one of generally clearing the lines every 5th year except where there were special fire protection measures round regeneration areas. This was prescribed to lessen the expense and because growth on many lines was negligible. The policy has not been entirely successful. Growth on the lines has in some places become rampant and general fire protection is hindered in consequence. Boundary pillars were also repaired or replaced on a quinquennial rotation and this work has been generally successful.

42. The forests were constituted reserved forests under the Indian Forest Act VII of 1878. The following is a list of the number and dates of the notifications under which the various blocks have been declared Reserves :—

43. There are no rights of any description in the Reserved Forests of the Sambalpur East Division.

44. *Concessions*.—Concessions are limited to permission for all villagers to remove fruits and flowers for their *bonafide* personal consumption, provided that when produce of a commercial value is removed the amount is limited to one seer at a time. Free grants of timber, bamboos and thatch grass are made in times of calamity, such as flood or fire. The value of these free grants is generally under Rs. 500 per annum.

45. Besides these concessions there is a temple on the Budharaja hill where there is daily worship and where a *mela* is held annually during the Shivaratri festival. No right of this has been admitted but is allowed without particular permission being asked for or granted.

46. Similarly in Lachmidungri Block there is a temple and an annual fair held during the Kartikpurnima festival. In Laldera Block also the place Gosain Muth is occasionally visited for worshipping the diety, especially in October and November.

47. Again permission is annually asked and granted for *melas* to be held in the Tabla block for two days in February-March.

CHAPTER II.

DESCRIPTION OF THE FOREST.

Composition
and condi-
tion of the
crop.

48. The forests of Sambalpur are situated in the deciduous forest zone and in the great *sal* (*Shorea robusta*) tract. *Sal* does not, however, hold such a commanding position as it often does in other places. In fact the Sambalpur forests approximate more to a Savannah type than most *sal* forests. In some places *sal* is as pure and dominant as elsewhere. In others it is struggling hard to withstand bamboos (*Dendrocalamus strictus*) and other more xerophytic and deciduous species which are often successful in monopolizing the ground.

49. This drier and poorer character of the Sambalpur forests can be attributed partly to the climate. The maximum temperature does not rise very much higher than in other localities where *sal* is supreme. The annual rainfall compares favourably with that of Singhbhum. But a study of the mean monthly rainfall, monthly maximum temperature and, more important, the mean monthly relative humidities, show that Sambalpur is distinctly hotter and drier than Chaibassa (a sample locality near the great Singhbhum *sal* forests) during the months December to June.
